

# Botond Osvath Software Developer

BUDAPEST, HUNGARY · osvth.botond@gmail.com

#### **SKILLS**

A results-driven and motivated Medior Software Developer with a strong base of programming knowledge acquired through academic studies, hobby projects and consistent work throughout the years. Now I am searching for a job to settle down. Why?

#### **EDUCATION**

# University of Aberdeen, BSc. Computing Science

Sep 2019 — Jun 2023

- Graduated with Honors (Upper class)
- **Co-founder** of the Hungarian Society, actively involved in organizing events and fostering cultural exchange within the university community.
- A seven-person team under my direction and instruction created a large-scale software system that included back ends and a mobile app that supports the environmental crisis.
- Possessing an ardent passion for artificial intelligence and its boundless applications, I proudly <u>authored</u> an insightful <u>thesis</u> on reinforcement learning, delving deep into the intricacies of general AI systems. This rewarding endeavor allowed me to hone my skills in algorithm development, algorithm optimization, and advanced programming techniques, while simultaneously broadening my understanding of machine learning paradigms.

## **SKILLS**

Motivated Attitude

Work Ethic

Teamwork Skills

Patient Advocacy

Multitasking Skills

Honesty and Integrity

Hungarian

#### **PROJECTS**

- As a passionate web developer, I have had the unique opportunity to integrate my teaching capabilities with my
  technical expertise through a broad range of projects. Among them, I developed the Hungarian teaching platform
  Okostojás (MySmartegg) using .NET Core MVC, the platform is carefully designed and optimized to provide
  efficient student and teacher matchmaking and teaching services.
- Another remarkable milestone in my career was my involvement with Colibr, a **charity application** that, unfortunately, has since been shut down. When I received the news of its closure, I reflected on the invaluable experiences and lessons I gained from working on this meaningful project.
- One of the most rewarding aspects of my time with Colibr was teaching two talented students who had no prior
  experience in web development. Guiding them through the fundamentals and watching their skills flourish was
  incredibly fulfilling. Under my tutelage, they not only developed their technical abilities but also learned to
  collaborate effectively, ultimately contributing meaningfully to the development of a functional web application.
  This experience underscored the value of sharing knowledge and fostering growth, both for others and for
  myself.

#### WHAT I LEARNT FROM THESE PROJECTS

#### **Customer Engagement & Feedback Loop**

• Strengthened interpersonal skills and gained firsthand insights into user needs, refining the platform's matching features accordingly.

#### **Guidance & Marketing Insight**

• Expanded my skill set beyond programming by gaining hands-on exposure to market segmentation and promotional tactics—insights that helped me better support the product vision.

# **Iterative Development & Continuous Improvement**

• Adopted an agile mindset, running short development cycles and frequent testing to ensure the final product aligns with user expectations.

## **Professional Growth Through Collaboration**

• Learned how to work within cross-functional teams, valuing shared goals and mutual support, which enriched my ability to contribute meaningfully to project objectives.

# **Holistic Approach to Product Creation**

 Gained deeper appreciation for how marketing, user experience, and software engineering intersect to create a successful product.

#### **EMPLOYMENT**

## Full stack Developer, IT-Pro Support

Jan 2021 — Present, Llangollen

- Designed, constructed, and contributed to more than <u>19</u> versatile full-stack systems using C#, ASP.NET,
   .NET Core and JavaScript, significantly improving business across various sectors.
- Contributed to the development of a comprehensive intranet web application for a multinational warehouse company. This application, designed to manage hundreds of warehouse employees, included features such as custom holiday management tools and multi-tiered permission management. The project's success was underscored by the promotion of the individual who cooperated closely with me throughout the development process, highlighting the tangible benefits of our collaborative efforts.
- Developed a web-based management system for world-leading fire and explosion safety consultants that
  automated routine tasks and streamlined the creation of 100-page Word documents and PDFs,
  resulting in significant time savings and increased efficiency for safety professionals.
- Implemented an **online accounting software API** and **re-engineered a business' inventory management system**, enabling seamless handling of stocks, invoicing, and emailing processes, thereby ensuring consistent customer satisfaction.
- Significantly <u>boosted developer productivity</u> with an innovative <u>internal automation too</u>l that generates full-stack web applications based on SQL database schemas.
- I have played a significant role in contributing to an internal web application for an internationally renowned emergency response and rescue organization operating in both Europe and globally. While originating over 15 years ago, the project continues to be effectively managed and operates seamlessly, showcasing the long-term impact of my contributions to fostering adaptive and resilient systems.
- I have successfully contributed to multiple transportation systems, where my efforts involved GPS coordinate
   <u>calculation</u>, <u>automated road planning</u>, and other related tasks. My expertise in these areas has helped
   enhance the efficiency and accuracy of these systems, ensuring optimal navigation and route planning
   solutions.
- Together with a senior programmer, I successfully developed an <u>extensive intranet system</u> for managing various aspects of our **business**, including **client**, **backup**, **timesheet**, **contract**, and **invoice** management. In addition to this, we also created a separate <u>client-facing platform</u> designed to facilitate feedback, ensuring seamless communication and improved customer satisfaction.
- At a company specializing in Inspection Management, I leveraged my expertise to successfully improve
  their existing intranet web application. Recognizing the need for enhancements, I took the initiative to
  split the original web application into separate client and admin sides, spearheading the development

- process independently. My contributions have significantly streamlined the application's functionality, providing more efficient and **user-friendly experience** for both **clients** and **administrators**.
- I developed an intranet web application for a prominent independent courier company serving North
  Wales and the Northwest region. My expertise and efforts have contributed to <u>streamlining internal</u>
  <u>processes</u> and <u>improving communication within the organization</u>, further **enhancing** its **service delivery capabilities**.

## PROFESSIONAL TECH EXPERIENCE

(From projects and roles held at companies or organizations)

- .NET Core MVC && ASP.NET WebForms C# (4 years)
- jQuery JavaScript HTML CSS (4 years)
- Database Management SQL MSSQL (4 years)
- Python & Machine Learning (1 year)

#### EDUCATION & INDEPENDENT / PERSONAL EXPERIENCE

(From hobby projects and passion for technology)

- .NET Core MVC C# (6 years)
- jQuery JavaScript HTML CSS (8 years)
- Database Management SQL MSSQL (8 years)
- Python (4 year)
- Windows Forms Applications (legacy)
